빅데이터 엔지니어링
Lab 1

Making a Connection with MongoClient

- MongoClient를 받아옴

  - >>> from pymongo import MongoClient
    >>> client = MongoClient('localhost', 27017)

Getting a Database

- PyMongo를 통해 database에 있는 db들에 접근할 수 있음

  - >>> db = client.test

Database System Lab

Getting a Collection

- Collection은 a group of documents in MongoDB이다

- RDB에서의 table과 비슷한 개념

- >>> posts = db.posts

Seoul National University   Database System Lab

Documents

- post = {"author" : "Mike",
          "text" : "My first blog post!",
          "tags" : ["mongodb", "python", "pymongo"]}

Database System Lab

Insert a document to collections

- >>> posts.insert(post)

- >>> posts.find_one()

Seoul National University

Database System Lab
